

## A metal rescue basket stretcher, commonly used for transporting patients. It features a blue mesh floor, metal side rails, and various straps and handles for securing a patient and lifting the device.

For many years the accepted method for securing a patient in a litter was improvised internal and external lashings using one-inch tubular web. Critical patient-packaging time could be lost and often the finished lashing was either too tight or too loose. Looking for a quicker and more secure way, we developed our Patient Tie-In System after testing a variety of prototypes in CMC School classes.

The refined product weighs less, is quick and secure, and can be easily adjusted to meet the patient's requirements for comfort. Color-coded web helps keep the system organized. Available for a one-piece or two-piece litter and can be used with the included pelvic harness to support the patient's weight when the litter is placed in a head-up position, or used for a patient on a backboard.

Please note this page offers the full kit (patient tie-in system and pelvic harness), as well as the individual components. Please contact **Customer Support** if you have any questions.

- Sold as a kit with the pelvic harness included to support patient's weight
- Models available for one-piece and two-piece litters
- Lightweight and adjustable to meet patient's comfort requirements
- Color-coded web makes securing patient quick and intuitive
- Snap ring closures save critical patient packaging time
- Compatible with litters, stretchers, and backboards
- Included stuff bags for tie-in straps and pelvic harness

<b>Option</b>	Kit for One Piece Litter
<b>Item</b>	500701
<b>COMPONENTS</b>	PATIENT TIE-IN SYSTEM (ONE PIECE) & PELVIC HARNESS
<b>WEIGHT</b>	2.3 KG (5.3 LB)
